

Year 6 Geography

How can we make our local area more sustainable?

Glossary

Natural resources: Materials or substances that occur in nature. Not man-made.

Renewable: A natural resource that can be replaced when used.

Non-renewable: A natural resource that will run out one day.

Sustainable: Able to be continued at a good level over a good level of time.

Fossil fuels: Oil, coal and natural gas. Formed from the remains of plants, animals and other living things a long time ago. A non-renewable natural resource.

Carbon neutral: The term given to attempts to remove carbon dioxide from the atmosphere.

Green energy: Comes from natural sources such as sunlight, wind, rain, tides, plants, algae and heat. They are renewable.

Biomass: Organic matter that can be used as fuel, especially in a power station for the generation of electricity.

Turbines: A machine for producing continuous power in which a wheel or motor is made to revolve by a fast-moving flow of water, steam, gas or air.

Sustainability around the World

Vertical forests in Milan

Electric buses in Copenhagen

Red Hill Riches

I know:

Sustainability is the avoidance of depletion of natural resources

Cities across the world are finding ways to be sustainable including vertical forests, electric cars and solar panels on schools.

A fieldwork survey can collate a selection of data about an area of interest

Conclusions can be drawn based on fieldwork data

Wide range of recycling options
