

Year 2 Living Things and their Habitats- What is a food chain?

Glossary

Example of food chains

Carnivores

Herbivores

Omnivores

Red Hill Riches

I know:

Living things move, grow, consume nutrients and reproduce.

Habitats are places where creatures live to provide food and shelter.

A simple food chain follows the direction of a food source.

Last Year's Linked Learning

I know:

Common animals can be grouped as reptiles, amphibians, fish, mammals or birds

Common animals can be grouped into carnivores, herbivores and omnivores.
