

Year 6 Light- How does light travel?

Light travels in a straight line

Reflection

Red Hill Riches

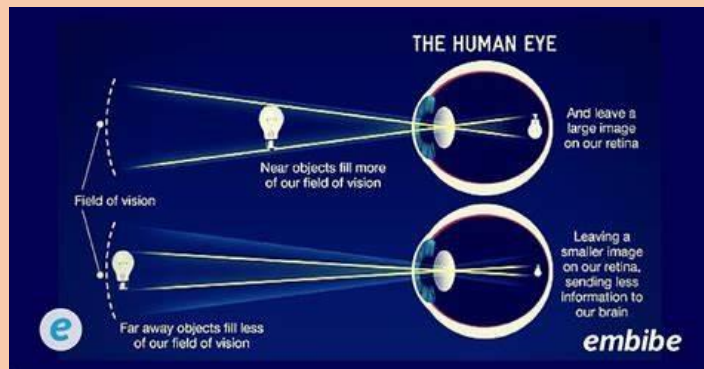

I know:

Light appears to travel in straight lines.

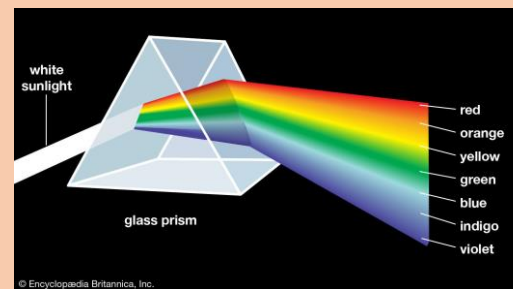

Objects are seen because they reflect light into the eye.

Shadows have the same shape as the objects that cast them.

How the eye sees

White light comprises of the colours of light

Linked Learning

Light is reflected from a surface.

Shadows are formed when light from the light source is blocked by an opaque object.

Shadows can change shape based on the height and direction of the light source.
